

Global challenge of NCD monitoring and surveillance

Sergey Boytsov

National Research Center for Preventive Medicine, Moscow

Why should we discuss the problem of NCD monitoring and surveillance?

1. NCD is the global problem
2. NCD monitoring and surveillance is the important part of NCD prevention
3. Different countries have different experience in NCD prevention
4. Different countries have different structure of RF, incidence, prevalence and mortality
5. Difficulties to estimate *real* structure of RF, incidence, prevalence and mortality
6. Need to develop new methods of early diagnosis of NCD (atherosclerosis especially)
7. Need to control the efficiency of NCD prevention measures
