

TOWARDS A PLANETARY HEALTH OBSERVATORY

Mathilde Pascal

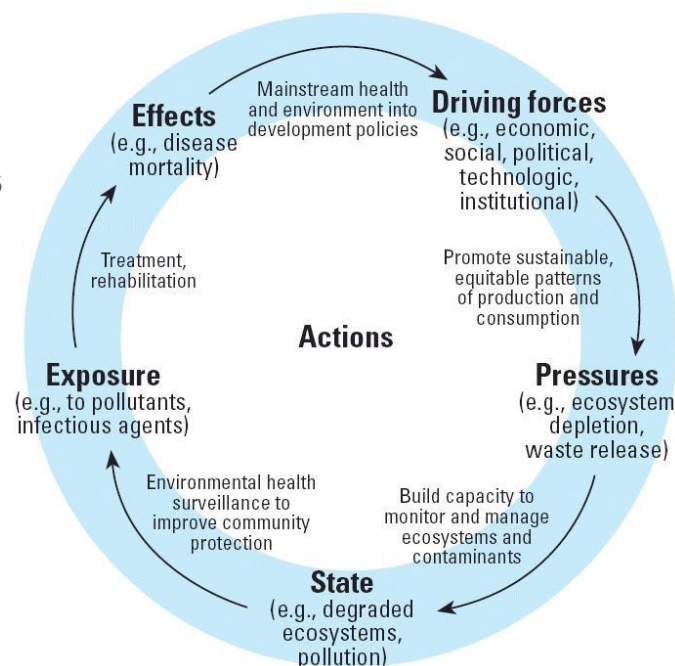

IANPHI webinar: developing indicators to drive relevant action
on climate change and health

14/11/2022

- IPCC Working Group II report 2022
 - recognizes the **interdependence** of **climate, biodiversity and people**
 - states that climate change is a global challenge that requires **local** solutions
- Multiple initiatives in needs of indicators on climate, biodiversity and health in France
 - lack of health indicators in the French national climate change observatory
 - **2nd French national adaptation plan** underlines the need of indicators on health and climate change to support adaptation policies
 - collectivities are requested to assess the **costs of inaction** on climate change and air pollution
 - several regions/cities, are developing « local IPCC » and **local climate policies**
 - the 4th French strategy on environmental health requires « **one health indicators** »
- As a NPHI, Santé publique France produces multiple indicators to support evidence-based public health policies
 - but few are explicitly linked with climate change or other environmental disruptions
 - or at a **geographical scale meaningful for local action**

AN OBSERVATORY TO CONNECT THE DOTS

- Main mission = to facilitate the **production, dissemination and follow-up** of relevant indicators to support climate policies in France
 - **methodological guidances**: definition, quality assessment, interoperability of databases
 - **complementarity** across **geographical scales** (international, national and local indicators)
 - **fitness for purpose**, assessed through pilot territories and **interactions with local stakeholders**
 - **interdisciplinary** scientific animation and **partnerships**
 - communication and dashboards
- Through an **integrative /one health /planetary health lens**
 - expanding a DPSEEA framework
 - method still under development!

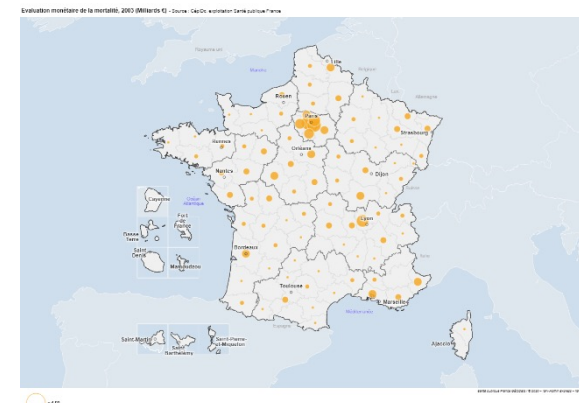

WORK IN-PROGRESS

- Already available
 - **guidance** on how to develop climate change and health indicators
 - indicators on **extreme heat and health** since 1974 (exposure - mortality impacts - economic valuation)
- On-going work
 - **scoping review** on relevant health topics to consider in France
 - development of new indicators
 - identification of relevant **partners** and **pilot territories**
 - proposition of a framework to introduce a **systemic/planetary health perspective** and test on pilot topics / territories
