Strengthening National Accountability and Preparedness for Global Health Security

Mishal S. Khan

IANPHI Annual Meeting, 4 December 2019
Problem

Existing global frameworks do not include enough country-specific data for robust preparedness monitoring.

While NPHIs are often considered to be the focal points for detecting and responding to health emergencies, there are challenges with accessing and using relevant data for preparedness.
Proposed solution

Access
- Identify existing national data relevant to NPHIs role in strengthening preparedness
- Characterize barriers to NPHIs obtaining high priority health-related data from multiple sectors

Analyze
- Understand NPHIs capacity to: analyze and visualize data; interpret data meaningfully; communicate data to relevant stakeholders

Action
- Identify barriers & gaps that prevent timely and appropriate action on preparedness data
- Identify actions & resources needed to fill gaps, focusing on peer-peer support
# Key Project milestones, 2017-present

Identified gap areas and country selection

**One Health Approach**

- Political and financial commitment
- Health systems resilience
- Research and development
- Knowledge and data sharing
- Trade and travel restrictions

**Countries**

- Nigeria
- Ethiopia
- Pakistan

**Sub-National Preparedness**

**Cross Border Coordination**

WHO Priority
Process

Identification and selection of frameworks and indicators (desk-based)

- Systematic review of national-level frameworks [Desk-based review]

Prioritization of indicators (in-country)

- Technical selection of indicators [Delphi Round 1: Technical Working Group]
- Prioritization of indicators [Delphi Round 2: Prioritization workshop in-country]

Module of core indicators

Interviews with NPHIs and stakeholders involved in data sharing

Pilot phase [6-week data collection exercise]
Nigeria prioritization workshop, February 2019
Pakistan prioritization workshop, February 2019
Ethiopia prioritization workshop, March 2019
Key findings

• Indicators gaps - data sharing with private providers and trade & travel

• Mechanisms and capacity for data sharing at subnational level needs strengthening

• Limitations in NPHI expertise (e.g. outside of human health) and adequate resources to engage outside the health sector
Opportunities for strengthening NPHIs

• Platforms to improve local knowledge of activities outside of the NPHI
• Advocacy for sufficient human and financial resources to fulfill mandate
• Legal establishment of the NPHI as accepted authority to share data with
• Formalized institutional relationships for data sharing
• Peer-to-Peer learning, IANPHI
SNAP project outputs

1. Catalogue of existing global preparedness frameworks with indexed indicators for preparedness

2. Lists of existing common national data sources within and outside the health sector that could inform NPHI on preparedness

3. Piloted toolkit for IANPHI-led assessment of Access, Analysis, Action to support individual NPHIs
